

# Roadmap to Career Domain

---

## Objective:

The main objective of the project is to provide proper track and suggestions to choose the best career domain, based on the student's own interest.

## Technology or methods:

To frame the solution, we are gathering information from the experts regarding the domains listed. We are providing a platform to serve the information regarding the career domains. we choose the MERN stack (MongoDB, Express JS, React JS, Node JS) to develop our platform (website), which is used by most developers worldwide. The main purpose of using the MERN stack is to develop websites using JavaScript only. This is because the four technologies that make up the stack are JS-based.

## Result:

Students will get more clarity and enough knowledge to set their future path by utilizing the sources provided on the website by redirecting them to the most appropriate and popular courses out there, and providing some best Bootcamp videos on youtube.

## Conclusion:

Many colleges and universities fail to provide the required number of graduates to meet the growing demand. So, offering a roadmap to Domain will help students to understand what opportunities exist.
